Motion Sequence No. 001

EXHIBIT 5

Saturday, May 11, 2019 at 7:17:33 PM Eastern Daylight Time

Subject: W50 update**Date:** Thursday, February 28, 2019 at 2:58:11 AM Eastern Standard Time**From:** Michael Lang**To:** DJ Martin, Charles Horsey, Lucas Cridland**CC:** Susan Cronin, Greg Peck, Firat Kasapoglu, Amanda Pelman

DJ, Lucas, Charlie,

We remain committed to an initial capacity of 102,000 as is being filed, and camping between 90,000 to 95,000 on site.

Superfly will not be permitted to adjust this down to 65,000. There is no rational reason to do this. Not from a safety point of view nor from a customer satisfaction point of view. People will be made aware of the shuttle program for tent camping and will buy or not accordingly.

Remember you were skeptical of our ability to book and we have delivered an amazing lineup in an incredibly short period of time. We will also deliver the necessary numbers to make this venture financially viable.

We are surprised by the lack of concern by Superfly for the financial viability of this endeavor, to the point where, as they see it, a little discomfort by some getting to the site, is cause to eliminate 35,000 potential attendees.

We are also disappointed in the lack of effort to solve problems. For example, using a bridge to cross a road to add 17,000 attendees.

Our preliminary search for answers to the concerns of Superfly has revealed that lightning protection is generally not on the top of the list of emergency issues for an outdoor festival. We spoke with several safety experts. They all stated that a single solution for an emergency situation could cause more harm than good and moving thousands of people at the same time could hold more risk than a lightning strike.

In our efforts to create a safe environment for the festival attendees we have sourced several preventive measures and services. Our goal is to exceed the reasonable practices found at most festivals.

We are engaging weather monitoring services from DTN WeatherOps which will enable us to have an accurate forecast 7 days in advance as well as a minimum of two hours notice before any potential weather-related problem occurs for the site. This gives us enough time to determine and execute the necessary actions.

Additionally, as the weather monitoring systems have evolved with new technologies, predicting severe weather has become more accurate than ever. As with many festivals and outdoor sports events, we will deploy Electric Field Sensors to collect electricity levels in the air in order to identify a lightning prone environment.

Although in general tents are not considered safe shelter from lightning, there are tent structures

that do provide sufficient protection when properly grounded and floored. Any large tent structure is better than being out on the field and we have found some which will have stamped engineer certifications for being lightning safe. Adding the tents to the existing bleachers and busses can provide enough shelter to our festival goers in case of a lightning emergency.

To clarify the question of land use for the festival we have compared our festival footprint with the other large U.S. festivals:

Bonnaroo Festival takes place on a land of 650 acres with additional lands around it for a maximum capacity of 70k to 80k. Longest path for a camper to walk to stage area is 1.4 miles.

Coachella Festival takes place on 400 acres and services 125K. Longest path for a camper to walk to stage area is 1.2 miles.

Okeechobee festival takes place on a 400 acres services 36 K. Longest path for a camper to walk to stage area 1 mile.

We have over 1370 acres of land as of now. In the previous permit applications of WGI it is stated that 50 sq ft per person has been used for calculation of the total land required by law. At 100,000 people that comes to 462 acres. There is no sensible reason to reduce the capacity based on the land currently leased.

The concern that being shuttled for 20 minutes, or that attendees will be so put off by walking to their campsites that they will light up social media with complaints, is just ridiculous. They will have an amazing Woodstock experience and will be talking about that for years.

As you know payments due to the bands must be made tomorrow to prevent our credibility and reputations in the industry from being destroyed. Agents are already demanding payments which are late. We need to preserve our good names.

Finally, I had been reserving the potential acquisition of an additional 250 acres until the initial application was accepted. Once done this property could be used to up the numbers to 125,000. The property is positioned perfectly to work with our site plan. It is only a matter of agreeing on a price. Due to the present situation, instead of waiting for the permit Susan and I will be working on the acquisition next week.

I know you have been disappointed with the way the attendance numbers have decreased, well so have we. We are in this situation because we were late in starting. We will make up the lost ground if we work together.
